

USING LAN INTERFACE

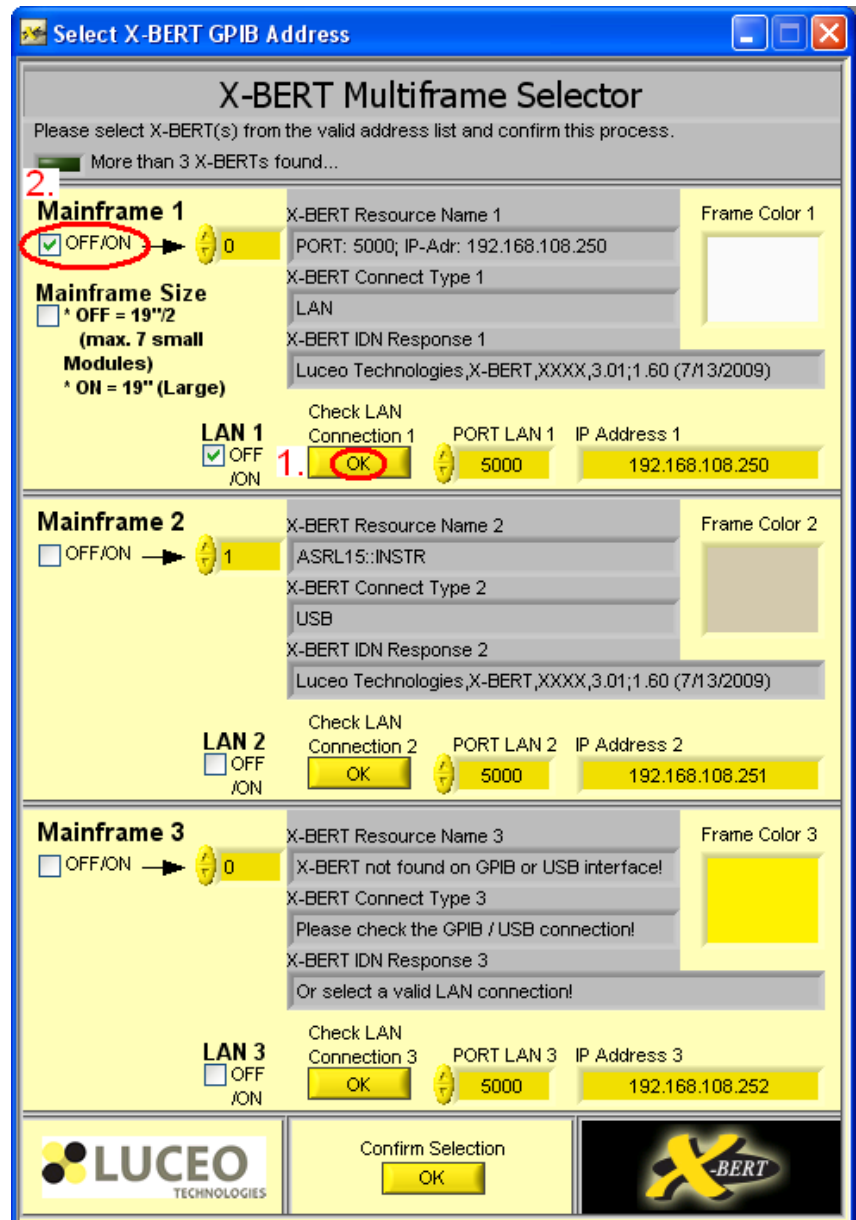

At startup the LUCEO X-BERT GUI scans the interfaces for connected X-BERT systems. As a nature of the protocols only USB and GPIB can be found automatically. For connecting to LAN the setup has to be done manually.

At first check the LAN connection. Provided the IP address¹ is correct and the port 5000 is unused, the relevant checkbox “LAN (1)” is to be checked.

¹ If you want change the LAN settings you can use the provided LAN-SERVER-TOOL.

It is also possible to change the network settings by using the command “*COMMON:LAN:SETIP x.x.x.x<LF>” to change the IP address, “*COMMON:LAN:SETSN x.x.x.x<LF>” to change the subnet mask and “*COMMON:LAN:SETGW x.x.x.x<LF>” to change the gateway address. If you want use this network settings you have to change to the CUSTOMER network settings by using the command “*COMMON:LAN:CONFIGSELECT CUSTOM<LF>”.

Secondly you can select the required Mainframe (2.).

USING LAN INTERFACE

APPLICATION NOTE 1008

Thirdly click the button labeled “confirm selection”. The connection is established and the operational GUI is starting.

Select X-BERT GPIB Address

X-BERT Multiframe Selector

Please select X-BERT(s) from the valid address list and confirm this process.

More than 3 X-BERTs found...

LUCEO TECHNOLOGIES GMBH

Located in Berlin, Germany, the company focuses on optoelectronic innovations in multiple fields. One of it is high – class test equipment.

Luceo's members have decades of optoelectronic experiences, collected in professional fiber optic companies and institutes.
